A2 GCE MATHEMATICS

4723/01 Core Mathematics 3

QUESTION PAPER

Candidates answer on the Printed Answer Book.

OCR supplied materials:

- Printed Answer Book 4723/01
- List of Formulae (MF1)

Other materials required:

- Scientific or graphical calculator

Duration: 1 hour 30 minutes

INSTRUCTIONS TO CANDIDATES

These instructions are the same on the Printed Answer Book and the Question Paper.

- The Question Paper will be found in the centre of the Printed Answer Book.
- Write your name, centre number and candidate number in the spaces provided on the Printed Answer Book. Please write clearly and in capital letters.
- **Write your answer to each question in the space provided in the Printed Answer Book.** Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer **all** the questions.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Do **not** write in the bar codes.
- You are permitted to use a scientific or graphical calculator in this paper.
- Give non-exact numerical answers correct to 3 significant figures unless a different degree of accuracy is specified in the question or is clearly appropriate.

INFORMATION FOR CANDIDATES

This information is the same on the Printed Answer Book and the Question Paper.

- The number of marks is given in brackets [] at the end of each question or part question on the Question Paper.
- **You are reminded of the need for clear presentation in your answers.**
- The total number of marks for this paper is **72**.
- The Printed Answer Book consists of **12** pages. The Question Paper consists of **4** pages. Any blank pages are indicated.

INSTRUCTION TO EXAMS OFFICER/INVIGILATOR

- Do not send this Question Paper for marking; it should be retained in the centre or recycled. Please contact OCR Copyright should you wish to re-use this document.

1 Find

(i) $\int (4 - 3x)^7 dx,$

(ii) $\int (4 - 3x)^{-1} dx.$

[5]

2 Using an appropriate identity in each case, find the possible values of

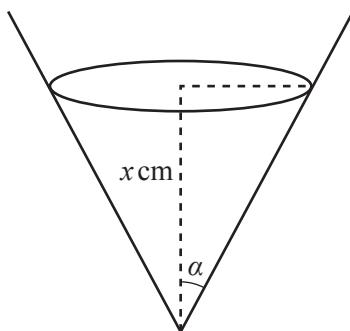

(i) $\sin \alpha$ given that $4 \cos 2\alpha = \sin^2 \alpha,$

[3]

(ii) $\sec \beta$ given that $2 \tan^2 \beta = 3 + 9 \sec \beta.$

[4]

3

The diagram shows a container in the form of a right circular cone. The angle between the axis and the slant height is α , where $\alpha = \tan^{-1}(\frac{1}{2})$. Initially the container is empty, and then liquid is added at the rate of 14 cm^3 per minute. The depth of liquid in the container at time t minutes is $x \text{ cm}$.

(i) Show that the volume, $V \text{ cm}^3$, of liquid in the container when the depth is $x \text{ cm}$ is given by

$$V = \frac{1}{12}\pi x^3.$$

[The volume of a cone is $\frac{1}{3}\pi r^2 h.$]

[2]

(ii) Find the rate at which the depth of the liquid is increasing at the instant when the depth is 8 cm. Give your answer in cm per minute correct to 2 decimal places.

[3]

4 Find the exact value of the gradient of the curve

$$y = \sqrt{4x - 7} + \frac{4x}{2x + 1}$$

at the point for which $x = 4.$

[6]

5 (i) Give full details of a sequence of two transformations needed to transform the graph of $y = |x|$ to the graph of $y = |2(x + 3)|.$

[3]

(ii) Solve the inequality $|x| > |2(x + 3)|$, showing all your working.

[5]

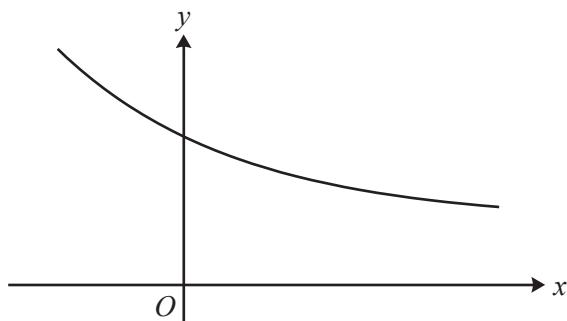

- 6 The value of $\int_0^8 \ln(3 + x^2) dx$ obtained by using Simpson's rule with four strips is denoted by A .

(i) Find the value of A correct to 3 significant figures. [4]

(ii) Explain why an approximate value of $\int_0^8 \ln(9 + 6x^2 + x^4) dx$ is $2A$. [2]

(iii) Explain why an approximate value of $\int_0^8 \ln(3e + ex^2) dx$ is $A+8$. [2]

7

The diagram shows the curve $y = f(x)$, where f is the function defined for all real values of x by

$$f(x) = 3 + 4e^{-x}.$$

(i) State the range of f . [1]

(ii) Find an expression for $f^{-1}(x)$, and state the domain and range of f^{-1} . [4]

(iii) The straight line $y = x$ meets the curve $y = f(x)$ at the point P . By using an iterative process based on the equation $x = f(x)$, with a starting value of 3, find the coordinates of the point P . Show all your working and give each coordinate correct to 3 decimal places. [4]

(iv) How is the point P related to the curves $y = f(x)$ and $y = f^{-1}(x)$? [1]

- 8 (i) Express $4\cos\theta - 2\sin\theta$ in the form $R\cos(\theta + \alpha)$, where $R > 0$ and $0^\circ < \alpha < 90^\circ$. [3]

(ii) Hence

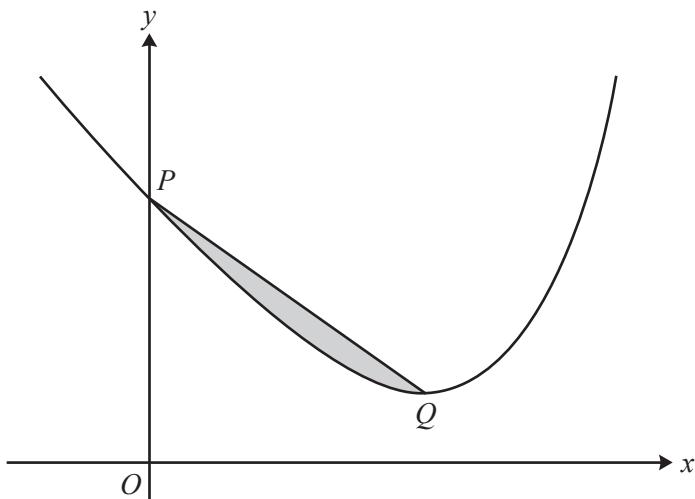

(a) solve the equation $4\cos\theta - 2\sin\theta = 3$ for $0^\circ < \theta < 360^\circ$, [4]

(b) determine the greatest and least values of

$$25 - (4\cos\theta - 2\sin\theta)^2$$

as θ varies, and, in each case, find the smallest positive value of θ for which that value occurs. [5]

9

The diagram shows the curve

$$y = e^{2x} - 18x + 15.$$

The curve crosses the y -axis at P and the minimum point is Q . The shaded region is bounded by the curve and the line PQ .

- (i) Show that the x -coordinate of Q is $\ln 3$.

[3]

- (ii) Find the exact area of the shaded region.
